There was a need to lead from the front and initiate a plan to identify strategies, next steps, and key partners for improving the oral health of people with disabilities as well as the oral health care delivery system for this population and integrate it with our existing infrastructure. Hence, MAIDS has been running the Clinics for the Disabled People on Tuesdays and Fridays ; 2-4 pm in the existing Department of Conservative Dentistry & Endodontics since November 2017. The bone and amnion grafts, thus produced, are now being extensively used to replace, repair and improve the quality of diseased and damaged oral tissues thereby, greatly contributing in enhancing oral health. Freeze drying machine has been procured this year which was previously been shared with G B Pant Hospital. The tissue bank is in the process of shifting to Phase 2 Building which will have separate Dry and Wet areas for procuring of grafts. A separate clean room for packaging and storage has been planned in addition to a Record keeping and documentation area.
- 4) **Orbital implants:** Maxillofacial implant is the leading treatment modality in patients with maxillofacial defects such as loss of eye due to orbital exenteration or loss of ear due to the trauma. Placement of maxillofacial implants requires a multidisciplinary approach for the success of the prosthesis. For the first time in the history of MAIDS, orbital implants

are being placed by the department of Prosthodontics in collaboration with the Guru Nank Eye Centre. (GNEC) .

- 5) **Orbital Prosthesis:** Rehabilitation of orbital defects has been considered as one of the most challenging aspect of facial reconstruction. In cases where surgical restoration is not possible, fabrication of orbital prosthesis becomes a necessary alternative. However, in cases where maxillofacial implants are not possible, retention of the prosthesis can be done. The rehabilitation can be done with a bicomponent hybrid orbital prosthesis wherein the inner conformer is digitally fabricated.
